Solution Architecture Documentation

Team Leadership & Configuration: Mounika Sanapathi (Team Lead) | Thakasi Balaji | Kale Sai Praneeth | Navyasri Gonnuri | Shanthi Kumari Challa

Solution architecture bridges the gap between clinical healthcare challenges and technology solutions. Its core goals are to find the ideal technology framework to resolve explicit clinical queries, describe the underlying processing structure, parameters, and behaviors to stakeholders, define development phases, and map specifications according to which the clinical dashboard is managed, evaluated, and delivered.

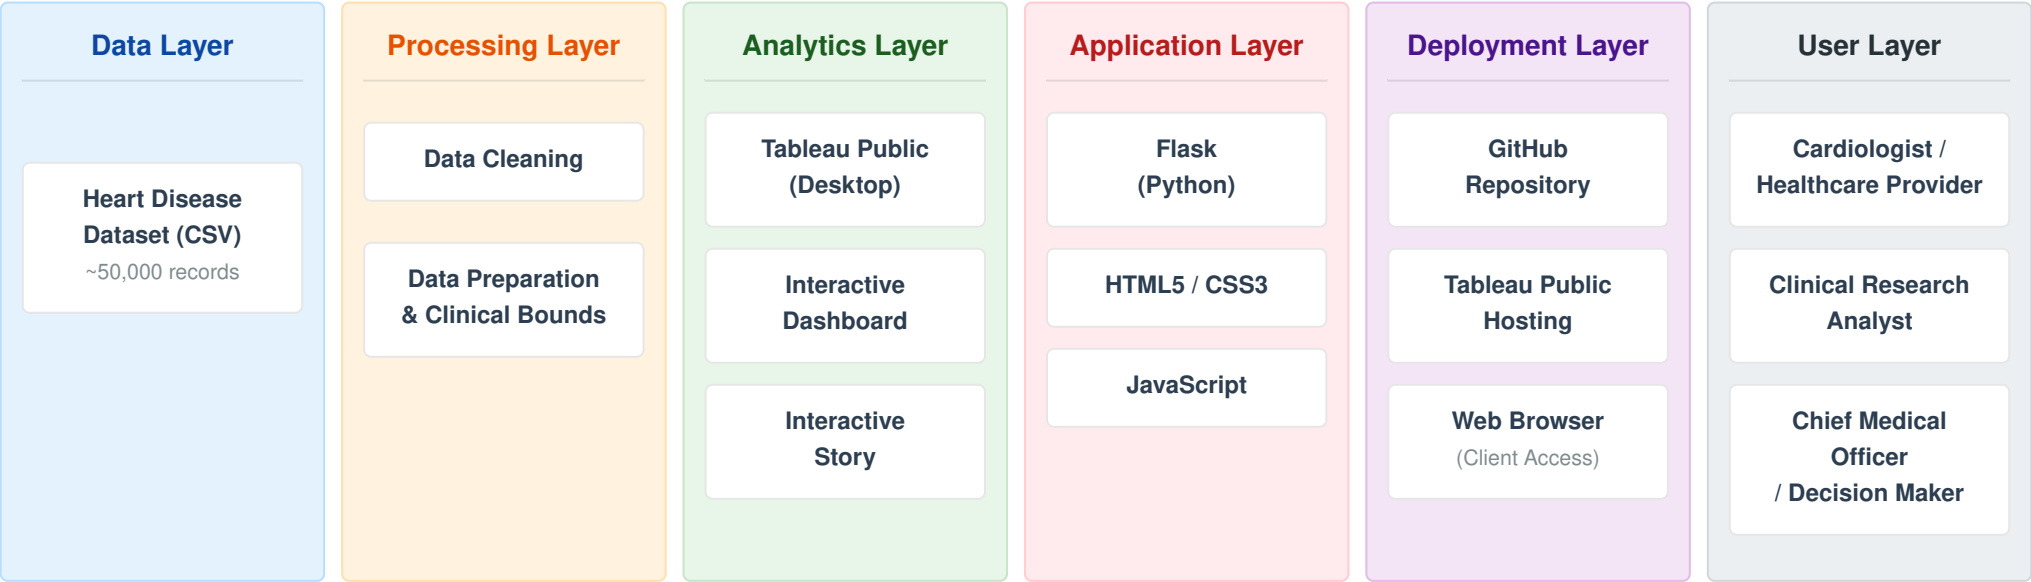

Figure 1: Technical pipeline layout and data flow of the Heart Disease Analysis dashboard application.

The structured technical execution framework covers the following system constraints:

- **Data Pipeline:** Ingests anonymized physiological clinical files containing multi-variable diagnostic tracking vectors.
- **Processing Matrix:** Resolves schema formatting inconsistencies, cleans out missing values, and checks metric verification constraints.
- **Visualization & Interface Framework:** Utilizes Tableau Public embedded securely within a dynamic, Python Flask-backed dashboard interface to grant medical professionals seamless access to complex diagnostic models.
